

# Front End Developer

## 1. Job Description

\*As our ReactJS developer, you will:

- Integrate existing SaaS products where possible (such as CRM tools, subscription management tools, analytics tools) – Using their 3rd party APIs to speed up our development time
- Create and maintain the web with ReactJs, Webpack, Enzyme, Redux, and Flux
- Build tools that support the marketing, sales and operational teams where required
- Work with product and operations teams to achieve target metrics that represent business success
- Suggest workflow process improvements and sustain self-organised agile teams
- Build pixel-perfect, buttery smooth UIs across both mobile platforms
- Leverage native APIs for deep integrations with both platforms
- Diagnose and fix bugs and performance bottlenecks for performance that feels native
- Maintain code and write automated tests to ensure the product is of the highest quality.

## 2. Requirements

- BS/MS degree (or equivalent experience) in Computer Science, Engineering or a related subject
- Minimum five years working experience in developing applications
- 1 years' experience working with React & React Native
- Comfortable working in an Agile environment (SCRUM, Kanban)
- Comfortable with Test-Driven Development (TDD)
- Excellent interpersonal and relationship building skills, with an ability to influence and drive other team members where required.
- React Native developers should also have comprehensive hard skills, including:
- A complete understanding of the entire mobile app development lifecycle, including iOS and Android platforms
- In-depth knowledge of CSS, JavaScript, HTML front-end programming languages, and functional programming
- Knowledge of responsive and user interface designs
- Experience with JavaScript development tools, such as ESLint and Jest

- Experience working with document request models, REST APIs, third-party libraries, and offline storage
- Full-stack web development is a plus
- Experience with TypeScript, unit testing, code debugging, and prop types
- Strong understanding of React fundamentals such as component lifecycle, Virtual DOM, and component state
- Familiar with REST APIs to connect a mobile application to the back-end service
- Excellent written and speaking English skills
- Proficient understanding of code versioning tools such as Git
- Understanding of fundamental design principles for building a scalable application
- Experience with Expo (or Native) messaging APIs and push notifications
- Familiarity with platforms like Segment, Mixpanel is a plus
- Previous experience with subscription products or calendar booking products a plus
